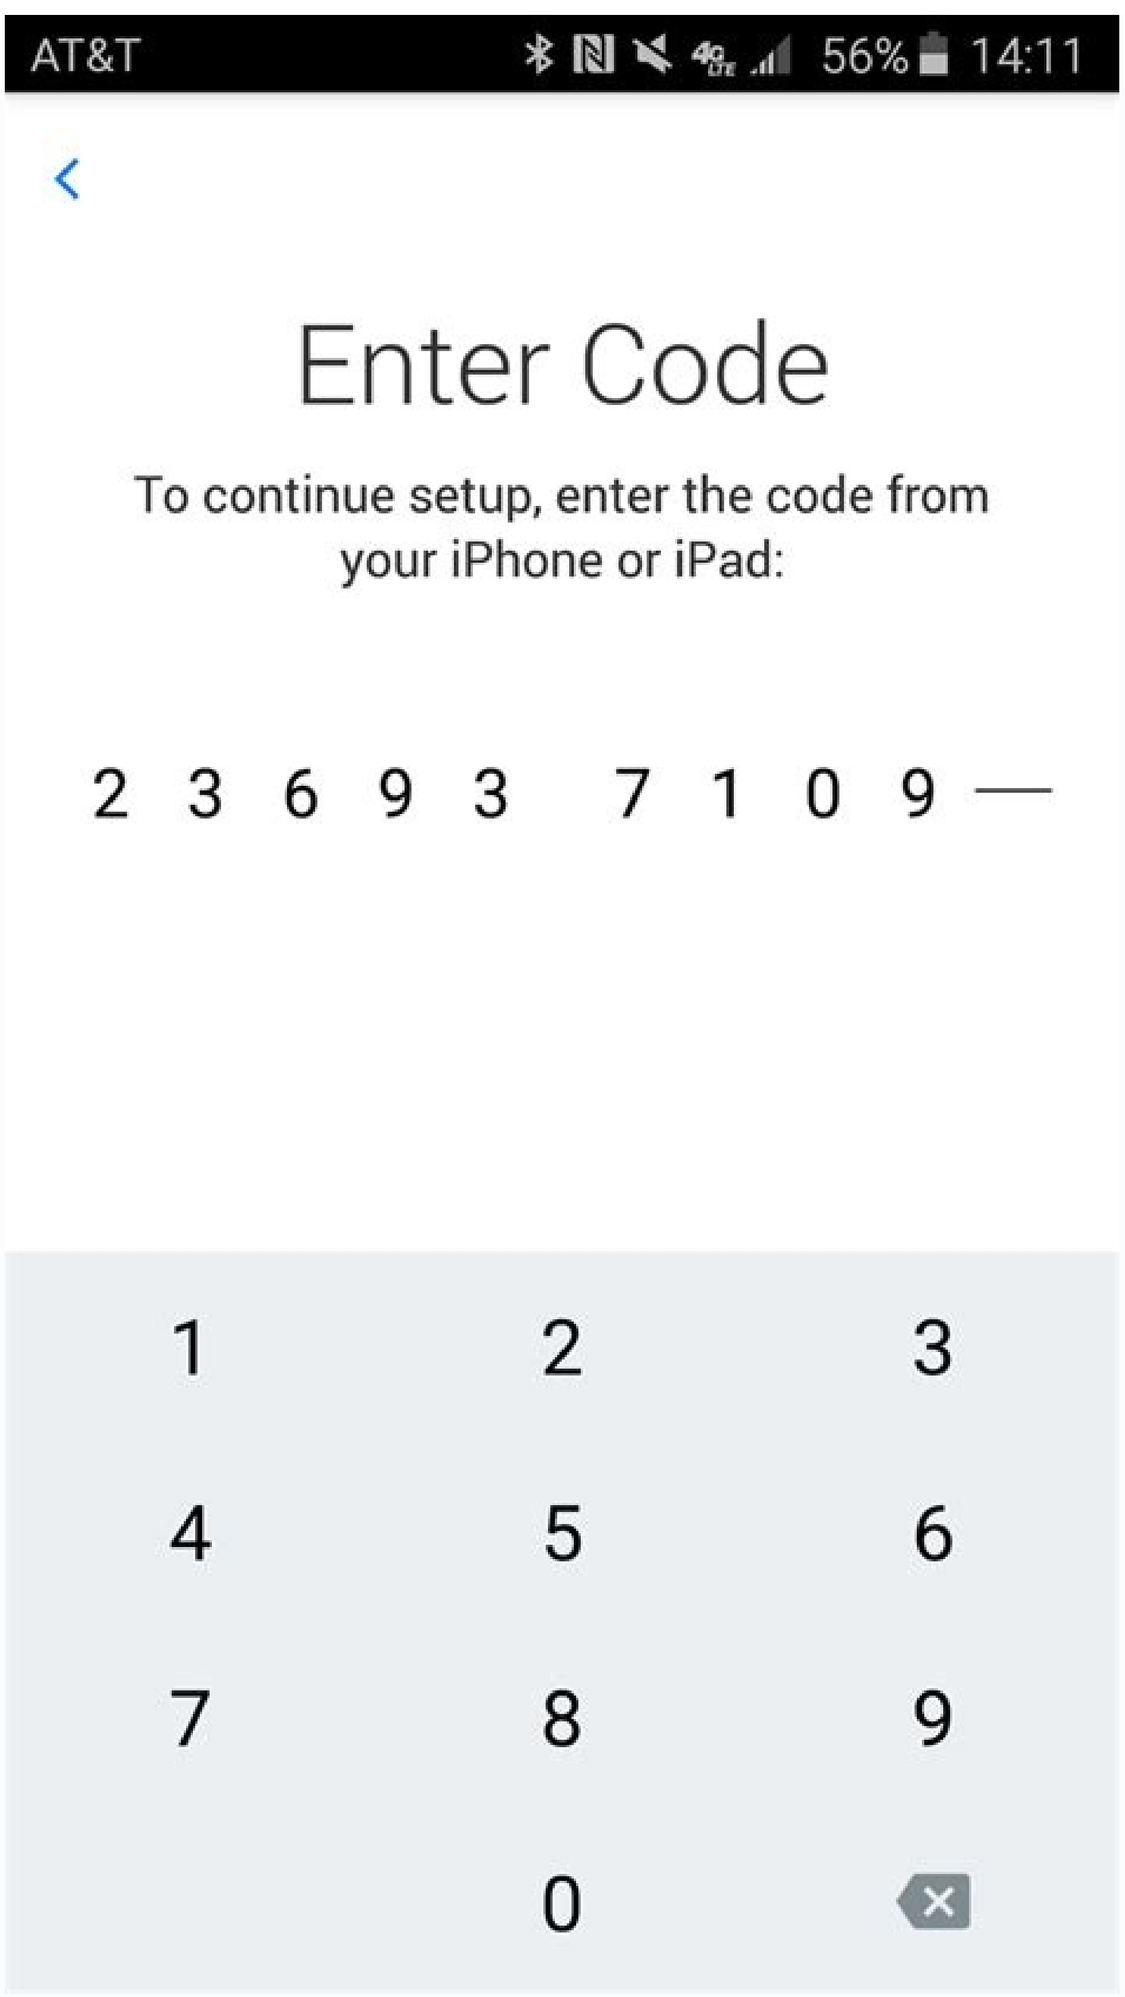
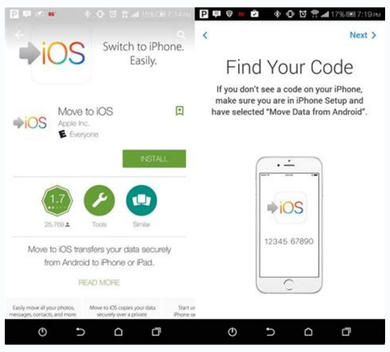
Move to iOS copies your data securely over a private Wi-Fi network.





Once a hopelessly difficult task, How to transfer contacts from iPhone to Android is now just a few clicks thing. Let’s see that in action. The battle for major Smartphone OSes has almost settled with the two prime candidates, Android & iOS: Source: Statista While the second half of 2021 had started to witness a gradual shift in favor of the Cupertino giant, a majority is nowhere on the horizon. iOS is still miles behind Android. And that will be the case for many years to come. In addition, it would be interesting to know that over 20% of iPhone users are planning a switch to Android. This data came out during the Epic Games and Apple Inc trial. That loyalty change can happen for so many reasons like: Customization I can’t emphasize this enough. There is so much you can change on an Android phone. You can pretty much theme everything: fonts, dialers, launchers, notification panel, icons, default apps, and whatnot. There is simply no end to how much creative you can get with an Android smartphone. Buyer’s Choice When you visit the Apple store for a purchase, you see these five devices to pick from: That’s it! iPhones simply won’t cut it if you crave alternatives. One has to remain content with just a handful of similar-looking cousins. And that can become boring after a few years, especially when you see your friends with these state-of-the-art Android handsets: Choice. That’s the pinnacle of buying an Android-powered smartphone. They come in a variety of form factors to match the taste of every living soul on the planet Earth. Bleeding Edge Tech Even mid-tier Android phones have features like Notchless displays and in-screen fingerprint sensors that are absent even on the top-of-the-line iPhones. And talk about foldable phones, and iPhones quickly start feeling out of context. Regarding the battery, it takes only a little over 50 minutes to fully charge the OnePlus 9 Pro vs close to 120 minutes for iPhone 13 Pro. In addition, you don’t have to shell over 500$ to get a decent Android smartphone. Conclusively, Android users get their hands on flashy new features far more quickly than their iPhone counterparts. The so-called iPhones’ stability takes years to materialize for every single feature, with the Android frequently outpacing the Apple with a significant margin. So a next-generation user has plenty of reasons to part ways with the Apple ecosystem to a more pocket-friendly, power-packed, and flexible alternative: Android. Consequently, the first thing that comes to mind is… There are a few ways to do this. Let’s start with the most obvious ones, followed by some 3rd party applications. Using iCloud Head over to Settings>Passwords & Accounts>iCloud. Check that the Contact sync is toggled on. Now open any web browser on your computer and log on to iCloud.com using the same Apple ID. Afterward, tap on the Contacts icon and select the contacts you want to transfer (press Ctrl+A/Command-A for selecting all contacts). Alternatively, you can tap Select All to select everything at once. Subsequently, tap on the Gear icon on the bottom left and click Export vCard. This will download the selected contacts in a VCF format. Finally, visit contacts.google.com with the google account that you’ll use on your Android smartphone, hit Import contacts, and select the downloaded file, and it’s done. Using Gmail Open Settings on your iPhone and then tap Mail. Now select Accounts and click the Gmail account to sync contacts to the Android device. Verify that the Contacts toggle is turned on. Now use the same account on your Android smartphone to pull the synced contacts. Using Google Drive Tap the hamburger icon on the top left of the Google Drive applications. Click Backup. Subsequently, enter into Contacts. Now verify that the toggle is turned on Afterward, go back and click START BACKUP. Finally, use the same Google account on your Android phone. So, that concluded some workarounds to transfer contacts from iPhone to Android. But we can also do the same with some 3rd-party apps. Using 3rd Party Apps MobileTrans MobileTrans by Wondershare is a one-click data migration solution. They support major brands, including Apple, Samsung, Google, etc. The process includes downloading MobileTrans on both phones, designating new and old devices, scanning the QR code, and selecting the data category to transfer. In addition to contacts, MobilTrans can migrate pictures, audio, video, etc. Smart Transfer Smart Transfer is yet another hassle-free application to transfer contacts from iPhone to Android. Similar to the previous one, the data is seamlessly transferred via a WiFi hotspot. You need to download the application on both devices, connect, and select the appropriate category to transfer. AnyDroid AnyDroid makes the transfer of contacts from iPhone to Android look easy. But it’s clearly more than that. You can use their premium application to migrate effortlessly from iPhone to Android. You can download their application and use it to transfer up to 30 contacts without any cost. This limit (30) is valid for the trial that applies to documents, videos, music, messages, etc., as well. Conclusion While all the listed methods solve the puzzling how to transfer contacts from iPhone to Android, the easiest way is to use the same Google account on both devices. However, we have one tutorial about multiple ways to transfer contacts between two Android phones if you’re just dabbling within Android. If you're moving from an iPhone to an Android, or you want to have two phones at once, you'll need to transfer your contacts. And while transferring contacts used to be as easy as switching SIM cards, you'll now likely need to move the data manually.Luckily, there are three easy ways to transfer your contacts from an iPhone onto an Android. Here's how. How to transfer contacts from iPhone to Android using Google DriveSyncing your contacts to Google Drive will let you transfer every contact on your device.1. Download the Google Drive app onto your iPhone and log into it with the Google account you want to use on your Android.2. Tap the three lines in the top-left corner, then tap Settings. Open your Google Drive settings. William Antonelli/Insider 3. Tap Backup. If you don't see this option, it likely means that your organization has restricted the data you can share with Google. If it appears, select the "Backup" option. William Antonelli/Insider 4. On the page that opens, tap Contacts and make sure the slider is toggled on, then go back and tap Start Backup. This might take a while, depending on how many contacts you have and if you chose to backup calendar events and photos too. Set up Google Drive to save your contacts. William Antonelli/Insider 5. Once they've been backed up, sign into that same Google account on your Android phone. All your contacts will transfer over. How to transfer contacts from iPhone to Android using GmailYou can also sync the contacts to Gmail. However, this will only transfer the contacts that are linked to your Gmail account. Also note that you'll need to have a Gmail account enabled on your iPhone beforehand to do this.1. On your iPhone, open the Settings app and tap the Mail option.2. Tap Accounts, and then select the Gmail account you want to use on your Android. Tap "Accounts" to see all your linked email accounts. William Antonelli/Insider 3. On the page that opens, make sure the Contacts slider is toggled on. Turn on the "Contacts" option. William Antonelli/Insider 4. Now on your Android phone, log in with that same Gmail account. All of that Gmail account's contacts should cross over automatically. How to transfer contacts from iPhone to Android using a vCardA vCard — also known as a .VCF file — is a standard file for holding contact information. Every phone can read them, which makes them perfect for transferring contacts.1. On your iPhone, open the Settings app and tap your name at the top.2. Tap iCloud, and make sure that Contacts are toggled on in the list of apps. Make sure that your contacts are saved to iCloud. William Antonelli/Insider 3. Now on your Android device, head to icloud.com and log into your iCloud account.4. Once you're logged in, tap the three dots in the top-right corner of Chrome and select Desktop site. Load the desktop version of iCloud. William Antonelli/Insider 5. On the new desktop version of iCloud, select Contacts, and then tap the small gear icon in the bottom-left corner. 6. In the menu that opens, tap Select All, and then Export vCard. Select all your contacts, then export them. William Antonelli/Insider 7. The .VCF file will download into your phone's files app — this might be called Files by Google, My Files, or something similar. Head to the files app and open it.8. When you're asked if you'd like to import the contacts, tap OK. Confirm that you want to import the vCard. William Antonelli/Insider Your contacts will be loaded in. Tech Reporter for Insider Reviews William Antonelli (he/she/they) is a writer, editor, and organizer based in New York City. As a founding member of the Reference team, he helped grow Tech Reference (now part of Insider Reviews) from humble beginnings into a juggernaut that attracts over 20 million visits a month. Outside of Insider, his writing has appeared in publications like Polygon, The Outline, Kotaku, and more. He's also a go-to source for tech analysis on channels like Newsy, Cheddar, and NewsNation. You can find him on Twitter @DubsRewatcher, or reach him by email at wantonelli@insider.com. Read more Read less One of your greatest concerns and worries when planning to switch your mobile phone is probably how to transfer contacts from iPhone to Android. Although iOS and Android are two incompatible platforms from the beginning, you can transfer your contacts between them in a breeze. Yes, you don’t even need a computer or any cable whatsoever. All you need is just the iPhone and your new Android device to carry out the simple process. So, how do I transfer contacts from iPhone to Android? This article contains the easiest methods to do that. Moving to Android shouldn’t be a barrier if you know the way out. Here’s the way: 1. How to transfer contacts from iPhone to Android using Google Contacts By far the easiest way to transfer contacts from iOS to Android is using Google Contacts. Yes, you don’t need a computer or any browser to accomplish that. It works just the same way syncing contacts on Android works. All you need is to delve into your iPhone settings, add your Google account, and turn on Contacts syncing. Before we show you the process, we guess you already have a Google account to use on your Android device. If not, you can create one via the Gmail app on your Android phone. After that, you can then learn how to transfer contacts from iPhone to Android without a computer by following these simple steps. Fire up the Settings app on your iPhone. Head over to Accounts & Password and select Add Account Select Google on the list and sign in with your primary Google account (the same account linked to your Android device). iPhone will ask what features you would like to sync with your Google account. Toggle on Contacts, then hit Save to start the syncing process. Now that you've instructed iOS to sync your contacts with Android, it will do so automatically. However, it may take a while to finish the process depending on your contact's capacity. Ensure you have a stable internet connection to amplify the process. READ MORE: Android Contacts Disappeared? Here’s How to Recover Lost Contacts on Your Phone 2. How to switch contacts from iPhone to Android using iCloud If you're still looking for how to transfer contacts from iPhone to Android without a computer, then the second easy method is to use iCloud. And if you've set up iCloud on iOS already, this method shouldn't take much time. Meanwhile, transferring your contacts to Android with iCloud requires you to first export your contacts to a .vcf file before importing them to your Android phone. It's not stressful as you may think. Just follow the steps below to do it. Step 1: How to export your contacts on iOS Pick up your iPhone and visit the Settings Now look straight at the top of the screen and tap your profile. Select iCloud from there and make sure you enable Contacts. Your contacts will start uploading to the iCloud by now, and you may need to wait for a few moments before taking the next step. Steps 2: How to import the vcf file to your Android device Once the contacts have been uploaded to your iCloud account, open Chrome on your Android device and switch to Desktop mode. Visit com and sign in to your Apple ID. Hit Contacts on the iCloud page and tap the gear icon in the bottom-left corner of the screen. From there, click on the Select all button to mark all your contacts, tap the gear icon again, then select Export vCard to download the .vcf file. Open the file once it's downloaded and select your Contacts You can now decide where you want to save the contacts on your Android device. We recommend selecting your Google account. Doing that saves the contacts on your phone as well as other devices connected to your Google account. READ ALSO: How to set android ringtones for calls, notifications, contacts 3. How do I transfer contacts from iPhone to Android via email or text? Meanwhile, if you only want to transfer a small portion of your contacts from iOS to Android, you can use the contact sharing feature. This allows you to share selected contacts via email or text. Obviously, you wouldn't be using this if you have hundreds of contacts on your iPhone, but it's an advantage for you if you only need to transfer a few of them to your new Android device. To get started, keep calm and follow these steps; Launch the Contacts app on your iPhone. Select a contact you want to transfer from iOS to Android Swipe down from there to transfer the contact. And finally, choose to share it over text or email As you can see, this method is only suitable if you have few contacts to transfer from your iPhone to Android. So, if you have thousands of them, you're better off using any of the two methods above. READ MORE: How to Fix Gmail Notifications Not Working 4. How do I transfer contacts from iPhone to Android via an app? Well, we bet you don’t need an app to transfer contacts from iPhone to Android, as you can do so with your existing accounts using one of the first two methods mentioned above. Even so, the popular apps around creates a .vcf file, which you need to import on your Android device manually. So, it makes no difference from using iCloud or Google Contacts. However, if you insist, or the methods above didn’t meet your needs, the My Contacts Backup app is one of the best apps that answers the question of how to move contacts from iPhone to Android. To get started, grab My Contacts Backup on your iPhone from the App Store, and follow the steps below. Launch MCBackup on your iPhone after installing it. You’ll receive a prompt to grant MCBackup access to your contacts. Tap Ok on the screen do so. Hit Back up on the screen and wait for a few seconds to compile your contacts to a .vcf file. After the process, tap the email option and send the .vcf file created to the Gmail account on your Android device Finally, open the email on your Android device on arrival, then tap the attached file to import your contacts to your Google account. That's basically how to transfer your contacts from iPhone to Android. Any of the methods you choose will definitely work for you either you use the iPhone 7, iPhone 8, iPhone X, iPhone 11, or even the big boy in town: the iPhone 12.
