Common Core: 8.F.3 Suggested Learning Targets I can recognize that a linear function is graphed as a straight line represented as an equation in the form $y = mx + b$. I can recognize the equation $y = mx + b$ is the equation of a function whose graph is a straight line where m is the slope and b is the y-intercept I can provide examples of nonlinear functions using multiple representations (tables, graphs, and equations). I can compare the characteristics of linear and nonlinear functions using various representations. The following table shows how to represent functions using graphs, equations, verbal explanations, and tables. Scroll down the page for more examples and solutions. Interpret the equation $y = mx + b$ as defining a linear function (Common Core 8.F.3) Linear v Non Linear Functions 1 (8.F.3) How can you tell if a function is linear? Graph is a straight line.
